The authors regret that in the original article there is an error in Fig. 5. Panel 5E incorrectly shows a blot for β -Actin that does not match the p-CREB blot shown above it. Nevertheless, this error does not affect the data presented in the original histogram, since quantifications of p-CREB and β -Actin were performed in the appropriate blots, corresponding to at least three independent experiments. Therefore, the histogram, image of the blot incubated with anti-p-CREB, and Figure legend are maintained. A corrected version of Fig. 5E is presented below.

The authors state that this error does not change the scientific conclusions of the article in any way.

The authors would also like to clarify the readers that since the same gel/ membrane was used to probe for different proteins, they all share the same β -Actin blot as a loading control. This is the case of Figs. 1B, 2B, 3B and 4D (long-term treatments), Figs. 2A and 3A (short term treatments), and Fig. 5A and D (BV2 cells), where the correspondent β -Actin was used as a loading control in the detection of different proteins expression levels.

The authors would like to apologize for any inconvenience caused.
